

Personal Profile

Results-oriented PHP Developer with extensive training, more than 5 years enterprise experience in Web site development at all stages of engineering, coding and testing of Web applications. I am seeking a position as a PHP developer in a fun, fast paced, cutting edge environment that promotes teamwork, integrity, fostering personal and professional development.

Key skills

- Object-oriented PHP, JavaScript, MySQL, Postgresql.
- Laravel, Yii2 framework, Bitrix framework, MVC, design patterns.
- Apache, Nginx, NodeJS, Web Services, WebSocket, RESTful Services.
- Excellent attendance and time keeping record.
- Excellent problem-solving skills.
- Bi-lingual: Ukrainian (fluent), Russian (fluent), English (intermediate).

Employment History

August 2020 – August 2022 • [Slotegrator](#) • PHP Developer

At Slotegrator I developed and maintained websites using frameworks like Yii2 and Laravel. Optimizing the loading speed of an existing Yii2 site, updating the design and functionality for working with it. Fully developing cycle of other projects from scratch on Laravel.

Key Achievements:

- [slotegrator.pro](#) (Yii2 framework) - Expanding the language versions of the site. Website modernization, which included changes in the design, content and functionality. Development of functionality for the admin panel. Adding new categories and functionality: list of authors, release notes, etc. Caching and various improvements to speed-up page loading. Search and cleaning from the malicious scripts. SEO technical changes.
- [slotegrator.online](#) (out of service) - Setting up feedback forms to send data to different **APIs** from site.
- [talentgrator.com](#) (Laravel framework + frontend) - job search site. Multilingual project development on the **Laravel framework** from scratch. **Database development**, usage **Laravel-admin** for admin panel, page layout using **HTML**, **CSS** and **JS**, setup forms, search and filtering.
- [client.slotegrator.pro](#) (Laravel framework) - service for storing various information about providers and games. Development from scratch of a new project on the **Laravel framework**. Designing a **database**, displaying pages that provide data in the form of tables, setting up user roles and access rights, displaying menus, interacting with various data and files to create / store / display / edit / delete them. Development of the main functionality for the administrator, employee and client. Automatic authorization by link and display of help documentation according to access settings. Export/import various data to/from Excel. Setting up processing requests from the feedback form.
- Building complex nested **SQL** queries to obtain the data from several tables.

October 2018 – September 2020 • [Leadsgenuine](#) • PHP Developer

Layout and development of landing pages, as well as support for existing sites. Users registration, integration with API, connection of payment systems and others.

Key Achievements:

- **HTML** layout of a large number of landings. Their setting for both **JS** and **PHP**.
- Working with a large number of different partners **API** and setting up feedback forms to work with them.
- Development of a functionality displaying information regarding registered users for the partners on the selected date (using partner's **API** to get user data).
- Setting the displays of the total number of registered users to all partners from all sites for the selected date.

- Importing an Excel file for mass sending lead data for registration to the partner's **API**.

*June 2017 – March 2020 • **Devkeeper** • PHP Developer*

In Devkeeper, together with colleagues we were engaged in the design and development of engineering software. During my time in Devkeeper I completed varying tasks while taking part in multiple projects.

Key Achievements:

- **Yoltik** – programming software to demonstrate floor and wall coverings using virtual reality. Using **Bitrix framework** I made a website for users who could order demo access to the program through the feedback form or buy full access. Using **Yii2 framework** with **MySQL** database I took part in developing Web interface for the service of selection of finishing materials.
- **Raduga2** Spectrometric analyzer. It is designed to automatically measure the mass concentration of uranium. I was involved in support and implementing a new functionality, regarding data processing using **Javascript**.
- **SAS SCR2** alarm system based on a dosimeter-alarm DRG-13N. Designed to detect self-sustaining nuclear chain reactions in nuclear hazardous areas designing and programming alarms using sound and light alarm devices. On the frontend I was involved in developing the interface using **AngularJS** and on the backend using **Yii2 framework** and **Postgresql**.
- **Intelcon** a mixture of "smart intercom" / "smart home" and a set of digital services for customers of an apartment building. In this project I was involved: setting up the web interface for the administrator using **Yii2 framework** and **PostgreSQL**; development of its own **API**; connecting to the portal of open data (directories), processing a large amount of information and output in **API**; output to the log of various information storing with NoSQL (**JSON**); all this was developed using an asynchronous programming model using **Javascript**; setting up a media server for uploading a video stream to the network using **NodeJS**.
- **Aroldphotos** – developed an **API** for receiving data from mobile device users using **Yii2 framework**. Processing and storage of photo, geolocation data.
- **Dordoc** service for storing, displaying and printing documentation using **React library** and **React-admin framework**.

Education

August 2023 • Skillshop – Google training platform, Fundamentals of digital marketing

June 2023 • English – ESOL course, Entry 3 Functional Skills

June 2023 • Living and Working in the UK

June 2023 • Prepare to Pass the Driving Theory Test

February 2023 • West of England Works, Improving your confidence

January 2018 • 1C-Bitrix, Bitrix Framework Developer

December 2016 • PHP programming courses at the IT-University of Infopulse Ukraine, Course listener

August 2012 • ISO partner, Administrator-developer of electronic document management system

May 2005 • National Transport University, Transport engineer

Hobbies/Interests

I enjoy baking a variety of different cakes for family and friends. I also enjoy practicing yoga with my wife. On weekends I like to spend time with my family, walk and enjoy nature.
